

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Original) A storage compartment for a refrigerator door, the storage compartment comprising:

 a box-shaped body having a longitudinal wall and a given depth; and

 a compartment divider attached to said longitudinal wall and extending over more than half of said given depth, said compartment divider defining a chamber for holding small items.

2. (Original) The storage compartment according to claim 1, wherein said compartment divider extends substantially entirely over said given depth.

3. (Original) The storage compartment according to claim 1, wherein an extent of said compartment divider in a direction of said given depth of said box-shaped body is greater than in a width direction.

4. (Original) The storage compartment according to claim 1, wherein said storage compartment has at least one sidewall with a concave shape in a direction of said given depth.

5. (Original) The storage compartment according to claim 1, wherein said chamber has an open base.

6. (Original) The storage compartment according to claim 1, wherein said compartment divider has a given height being less than that of said box-shaped body.

7. (Withdrawn) The storage compartment according to claim 1, wherein said compartment divider has a rider disposed over said longitudinal wall for attaching said compartment divider to said longitudinal wall, said rider having an inner surface and at least one vertical rib formed on said inner surface.

8. (Withdrawn) The storage compartment according to claim 1, wherein said compartment divider has outer walls and at least two vertical ribs disposed on said outer walls.

9. (New) A storage compartment for a refrigerator door, the storage compartment comprising:

a box shaped body having a longitudinal wall and a given depth with a slot extending vertically within the longitudinal wall at least along a portion thereof; and

a compartment divider having a rider extending downwardly spaced from a wall thereof located adjacent to said slot for being received within the slot for holding said compartment divider attached within said box shaped body, and said compartment divider defining a chamber for holding small items and extending over more than half of the given depth.

10. (New) The storage compartment according to claim 9, wherein said compartment divider extends substantially entirely over said given depth.

11. (New) The storage compartment according to claim 9, wherein an extent of said compartment divider in a direction of said given depth of said box-shaped body is greater than in a width direction.

12. (New) The storage compartment according to claim 9, wherein said storage compartment has at least one sidewall with a concave shape in a direction of said given depth.

13. (New) The storage compartment according to claim 9, wherein said chamber has an open base.

14. (New) The storage compartment according to claim 9, wherein said compartment divider has a given height which is less than the height of said box-shaped body.

15. (New) The storage compartment according to claim 9, wherein said rider has an inner surface and at least one rib formed on said inner surface.

16. (New) The storage compartment according to claim 15, wherein said slot includes at least one groove within walls defining the slot for engaging with said at least one rib.

17. (New) The storage compartment according to claim 9, wherein said slot and rider are sized to form a friction lock between said rider and walls of said box shaped body defining said slot.

18. (New) The storage compartment according to claim 9, wherein the compartment divider is defined by four connected walls which do not extend to a bottom of said box shaped body to define said chamber for holding items therein, and an open bottom for allowing items held therein to rest on a bottom of said box shaped body.
